Professional Summary

Aspiring Backend & AI/ML Developer with strong foundations in Python Experienced in designing and deploying scalable applications using FastAPI, MongoDB, and Streamlit, with beginner-to-intermediate exposure to ML/NLP. Passionate about building practical, real-world solutions and currently pursuing B.Tech IT.

Education

Indus University – Ahmedabad

B.Tech in Information Technology - 9.34 CGPA

Work Experience

Python Intern – Third Rock Techno

Aug 2025 – Present | Ahmedabad

- Developed backend features using FastAPI, LangChain, and MongoDB across projects including an anonymous feedback system, hospital management modules, and a RAG-based solution; implemented secure authentication with JWT and OAuth2.
- Collaborated closely with frontend teams and resolved key production issues such as verification email delivery and API reliability, improving system stability and user experience.

Certifications

AI Programming with Python – Udacity

Skills

Programming & Scripting: Python, Java, C, C++, SQL, NoSQL

Backend & Deployment: FastAPI, Streamlit, MongoDB, PostgreSQL, JWT Tokens, OAuth2, Middleware

Data Analysis & Visualization: Pandas, NumPy, Matplotlib, EDA

ML / AI (Beginner–Intermediate): Scikit-learn, OpenCV, FAISS embeddings, RAG

NLP & Text Analytics: Sentiment analysis

Tools & Version Control: GitHub, VS Code, Jupyter Notebook, Git

Projects

Hospital Management System

- Built a modular system for managing doctor, nurse, management, medicine and prescription with FastAPI and MongoDB.
- Implemented secure login, role-based access (doctor/nurse/management), and validation workflows for accurate operations.

Anonymous Form

- Engineered backend APIs using FastAPI to enable secure, anonymous form submissions with role-based access and data validation.
- Designed efficient MongoDB schemas and implemented robust CRUD operations for scalable data handling.

Roadmap Generator

- AI-powered career navigator using FAISS embeddings and RAG.
- Built retrieval pipeline and evaluation framework.

Stock Price Prediction: Hybrid Model (LSTM + Linear Regression + Rolling Mean)

- Developed a hybrid forecasting model improving RMSE and prediction stability, with clear trend visualizations.

Toxic Comment Classification

- Applied ML + NLP for toxicity detection (Jigsaw dataset).
- Evaluated using F1-score and AUC.
